Listing first 45 summaries
```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Scoring table:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Searched: 127863 seqs, 47026705 residues

Total number of hits satisfying chosen parameters: 127863

Minimum DB seq length: 0
Maximum DB seq length: 200000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database : SwissProt\_41:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mol. Biol. 266:1043-1049(1997).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Structure and activity of an active site substitution of ricin A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (-RAY CRYSTALLOGRAPHY (2.2 ANGSTROMS) OF MUTANT HIS-215
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -RAY CRYSTALLOGRAPHY (2.5 ANGSTROMS)
galactopyranoside moieties.

CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at specific adenosine on the 28s rrna.

SUBUNIT: Disulfide-linked dimer of A and B chains.

SUBUNIT: The B chain is composed of two domains, each domain consists of 3 homologous subdomains (alpha, beta, gamma).

PTM: THE MAJOR A-CHAIN IS GLYCOSYLATED ONLY IN POSITION 45 AND MINOR A-CHAIN IS GLYCOSYLATED ALSO IN POSITION 271.

SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY. TYPE 2 RIP SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            X., Hollis T.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FUNCTION: Ricin is highy toxic to animal cells and to a less extent to plant cells. The A chain is responsible for inhibiti protein synthesis through the catalytic inactivation of 60S ribosomal subunits. It acts as a glycosidase that removes a specific adenine residue from an exposed loop of 28S ribosomal RNA. As this loop is involved in the binding of elongation factors, the modified ribosomes are unable to support protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             synthesis. The A chain can inactivate a few thousand ribosomes per minute, thus inactivating them faster than the cell can make new ones. A single A-chain molecule can therefore kill an animal cell. The B chain binds to cell receptors and facilitates the entry into the cell of the A chain; B chains are also responsible for cell agglutination (Lectin activity). It binds to beta-D-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 39:1723-1728(2001).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Robertus J.D.;

--I- CAMALYTIC ACTIVITY: Endobydrolysis of the N-glycosidic specific adenosine on the 285 rRNA.
--I- SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE R INACTIVATING PROTEIN FAMILY. TYPE 2 RIP SUBFAMILY.
--I- SIMILARITY: Contains 2 ricin B-type lectin domains.

RT "Crystal structure of abrin-a at 2.14 A.";

RT OCCUPANTION: THE A CHAIN IS RESPONSIBLE FOR INHIBITING PROTEIN SYNTHESIS THROUGH THE CATALTTIC INACTIVATION OF 60S RIBOSOWAL CONSTRUCTION: THE A CHAIN IS RESPONSIBLE FROM POSITION 4,324 OF 28 S RRNA.

CONSTRUCTION: THE B CHAIN IS A GALACTOSE-SPECIFIC LECTIN THAT FACTLITATES THE BINDING OF ABRIN TO THE CELL MEMBRANE THAT FACILITATES THE BINDING OF ABRIN TO THE CELL MEMBRANE THAT FACILITATES THE BINDING OF ABRIN TO THE CELL MEMBRANE THAT SUBUNIT: DISULFIDE-LINKED DIMER OF A AND B CHAINS.

C-!- SUBUNIT: DISULFIDE-LINKED DIMER OF A AND B CHAINS.

C-!- DOMAIN: THE B CHAIN IS COMPOSED OF TWO DOMAINS, EACH DOMAIN CONSISTS OF 3 HOMOLOGOUS SUBDOMAINS (ALPHA, BETA, GAMMA).

C-!- SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-JUL 1989 (Rel. 11, Created)

Huang Q., Liu S., Tang Y., Jin S., Wang Y.;

"Studies on crystal structures, active-centre geometry and depurinating mechanism of two ribosome-inactivating proteins.";

Biochem. J. 309:285-298(1995).

-i- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 28S rRNA.

-i- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           P16094; P24697;

Xie L., Liu W.-Y., Wang E.-D.;

"Molecular cloning of cinnamomin A-, B-chain and the expression, purification, characterization and mutagenesis of the A-Chain.";

Submitted (SEP-2000) to the EMBL/GenBank/DDBJ databases.

-!- CATALYTIC ACTIVITY: ENDOHYDROLYSIS OF THE N-GLYCOSIDIC BOND /

-!- SIMILARITY: BELONGS TO THE 28S RRNA.

-!- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMI
